

Heat Transfer

Questions with Answer Keys

JEE Main 2020 Chapterwise

Physics

Q1 JEE Main 2020 - 3 September (Morning)

A 750Hz , 20V (rms) source is connected to a resistance of 100Ω , an inductance of 0.1803H and a capacitance of $10\mu\text{F}$ all in series. The time in which the resistance (heat capacity $2\text{J}/^\circ\text{C}$) will get heated by 10°C . (assume no loss of heat to the surroundings) is close to

- (A) 348 s
- (B) 418 s
- (C) 245 s
- (D) 365 s

Q2 JEE Main 2020 - 3 September (Evening)

A metallic sphere cools from 50°C to 40°C in 300s . If atmospheric temperature around is 20°C , then the sphere's temperature after the next 5 minutes will be close to

- (A) 28°C
- (B) 35°C
- (C) 33°C
- (D) 31°C

Q3 JEE Main 2020 - 6 September (Evening)

Three rods of identical cross-section and lengths are made of three different materials of thermal conductivity K_1 , K_2 and K_3 , respectively. They are joined together at their ends to make a long rod (see figure). One end of the long rod is maintained at 100°C and the other at 0°C (see figure). If the joints of the rod are at 70°C and 20°C in steady state and there is no loss of energy from the surface of the rod, the correct relationship between K_1 , K_2 and K_3 is

- (A) $K_1 : K_3 = 2 : 3$
- (B) $K_1 < K_2 < K_3$
- $K_2 : K_3 = 2 : 5$
- (C) $K_1 : K_2 = 5 : 2$

Questions with Answer Keys

Physics

(D) $K_1 > K_2 > K_3$

$K_1 : K_3 = 3 : 5$

Q4 JEE Main 2020 - 7 January (Evening)

M grams of steam at 100°C is mixed with 200g of ice at its melting point in a thermally insulated container. If it produces liquid water at 40°C [heat of vaporization of water is 540 cal/g and heat of fusion of ice is 80 cal/g], the value of M is

Heat Transfer

Hints & Solutions

JEE Main 2020 Chapterwise

Physics

Q1

$$H = (I_{rms})^2 R t$$
$$m S \Delta T = (I_{rms})^2 R t$$

$$= \frac{m S \Delta T}{(I_{rms})^2 R}$$

$$= \frac{2 \times 10}{(I_{rms})^2 \times 100}$$

$$I_{rms} = \frac{20}{\sqrt{(X_L - X_C)^2 + R^2}}, \quad X_L = 2 \times \pi \times 750 \times .1803$$

$$X_C = \frac{1}{2 \times \pi \times 750 \times 10^{-6}}$$

Put value in (i), t come out $\simeq 348$ s

Q2

$$\frac{\Delta T}{\Delta t} = -b (T_{av} - T_s)$$

$$\therefore \frac{50-40}{5} = -b[45-20]$$

$$\text{and, } \frac{40-T_3}{5} = -b \left[\frac{40+T_3}{2} - 20 \right]$$

$$\Rightarrow T_3 = \frac{200}{6} \approx 33^\circ \text{C}$$

Q3

$$K_1(100 - 70) = K_2(50)$$

$$K_3(20) = K_2(50)$$

Q4

$$M_{ice} L_f + m_{ice} (40 - 0) C_w = m_{steam} L_v + m_{steam} (100 - 40) C_w$$

$$\Rightarrow 200 [80 + 40 (1)] = m [540 + 60 (1)]$$

$$\Rightarrow 200 (120) = m (600)$$

$$m = 40 \text{ gm}$$
