

Q1 2021 (27 Aug Shift 2)

Let $A(\sec \theta, 2 \tan \theta)$ and $B(\sec \phi, 2 \tan \phi)$, where $\theta + \phi = \pi/2$, be two points on the hyperbola $2x^2 - y^2 = 2$. If (α, β) is the point of the intersection of the normals to the hyperbola at A and B, then $(2\beta)^2$ is equal to .

Q2 2021 (26 Aug Shift 2)

The locus of the mid points of the chords of the hyperbola $x^2 - y^2 = 4$, which touch the parabola $y^2 = 8x$, is :

(1) $y^3(x - 2) = x^2$

(2) $x^3(x - 2) = y^2$

(3) $y^2(x - 2) = x^3$

(4) $x^2(x - 2) = y^3$

Q3 2021 (26 Aug Shift 2)

The point $P(-2\sqrt{6}, \sqrt{3})$ lies on the hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$ having eccentricity $\frac{\sqrt{5}}{2}$. If the tangent and normal at P to the hyperbola intersect its conjugate axis at the point Q and R respectively, then QR is equal to :

(1) $4\sqrt{3}$

(2) 6

(3) $6\sqrt{3}$

(4) $3\sqrt{6}$

Q1 (36)

Since, point A($\sec \theta, 2 \tan \theta$)

lies on the hyperbola

$$2x^2 - y^2 = 2$$

$$\text{Therefore, } 2 \sec^2 \theta - 4 \tan^2 \theta = 2$$

$$\Rightarrow 2 + 2 \tan^2 \theta - 4 \tan^2 \theta = 2$$

$$\Rightarrow \tan \theta = 0 \Rightarrow \theta = 0$$

Similarly, for point B, we will get $\phi = 0$.

but according to question $\theta + \phi = \frac{\pi}{2}$

which is not possible.

Hence it must be a '*BONUS*'.

Q2 (3)

$$T = S_1$$

$$xh - yk = h^2 - k^2$$

$$y = \frac{xh}{k} - \frac{(h^2 - k^2)}{k}$$

this touches $y^2 = 8x$ then $c = \frac{a}{m}$

$$\left(\frac{k^2 - h^2}{k} \right) = \frac{2k}{h}$$

$$2y^2 = x(y^2 - x^2)$$

$$y^2(x - 2) = x^3$$

Q3 (3)

P($-2\sqrt{6}, \sqrt{3}$) lies on hyperbola

$$\Rightarrow \frac{24}{a^2} - \frac{3}{b^2} = 1 \dots \dots (i)$$

$$e = \frac{\sqrt{5}}{2} \Rightarrow b^2 = a^2 \left(\frac{5}{4} - 1 \right) \Rightarrow 4b^2 = a^2$$

$$\text{Put in (i)} \Rightarrow \frac{6}{b^2} - \frac{3}{b^2} = 1 \Rightarrow b = \sqrt{3}$$

$$\Rightarrow a = \sqrt{12}$$

$$\frac{x^2}{12} - \frac{y^2}{3} = 1$$

Tangent at P :

$$\frac{-x}{\sqrt{6}} - \frac{y}{\sqrt{3}} = 1 \Rightarrow Q(0, \sqrt{3})$$

$$\text{Slope of T} = -\frac{1}{\sqrt{2}}$$

Normal at P :

$$y - \sqrt{3} = \sqrt{2}(x + 2\sqrt{6})$$

$$\Rightarrow R = (0, 5\sqrt{3})$$

$$QR = 6\sqrt{3}$$
