

Q1 (2)

Hydrogen is most abundant element in universe because all luminous body of universe i.e. stars & nebulae are made up of hydrogen which acts as nuclear fuel & fusion reaction is responsible for their light.

Q2 (3)

Oxygen reduces from -1 to -2 So, its reduction will takes place. Hence it will behave as oxidising agent or it shows oxidising nature. While in other option it change from (-1) to 0.

Q3 (3)

Fact

Q4 (1)

Order of abundance of element in earth crust is

So second most abundant element in earth crust is Si not Ca.

Q5 (4)

Tritium isotope of hydrogen is radioactive and emits low energy β^- particles. It is because of high n/p ratio of tritium which makes nucleus unstable.

Given below are two statements : one is labelled as Assertion A and the other is labelled as Reason R.

Assertion A : Hydrogen is the most abundant element in the Universe, but it is not the most abundant gas in the troposphere.

Reason R : Hydrogen is the lightest element.

In the light of the above statements, choose the correct answer from the given below

- (1) A is false but R is true
- (2) Both A and R are true and R is the correct explanation of A
- (3) A is true but R is false
- (4) Both A and R are true but R is NOT the correct explanation of A
